

Validation of two invalid designations of non-geniculate coralline algae (*Hapalidiales*, *Florideophyceae*)

Paul W. Gabrielson¹

¹Department of Biology, University of North Carolina, Chapel Hill, Coker Hall CB 3280, Chapel Hill, North Carolina 27278-3280, USA (correspondence: drseaweed@hotmail.com)

The names of two species of non-geniculate coralline algae require validation here.

Boreolithothamnion lemoineae P.W.Gabrielson, Maneveldt, Hughey & V.Peña, sp. nov.

Replaced designation: “*Lithothamnium lemoineae*” Adey (1970: 228, no fig.), *nom. inval.*

Phycobank registration: <http://phycobank.org/105584>

Description: Adey (1970: 228, as “*Lithothamnium lemoineae*”, English and Latin)

Diagnostic figures: Adey (1970, pl. III [3]: figs 16, 17, pl. IV[4]: figs 18, 20, pl. VII[7]: figs 31–34 as “*Lithothamnium b*”).

Holotype: Merchant Island, East Penobscot Bay, Maine, USA, 3–5 m depth, leg. W.H. Adey Gl-41 1-6B, US.

Etymology: The specific epithet honours Marie Lemoine (1887–1984) of the Muséum National d’Histoire Naturelle in Paris, whose seminal work on extinct and extant coralline algae has enriched coralline taxonomy.

Note: *Lithothamnion lemoineae* W.H.Adey (1970, 228, as “*Lithothamnium*”) was proposed for the taxon he (Adey 1966a, 1966b) had called *Lithothamnium* “b”. Adey (1970: 228) wrote ‘*Lithothamnium lemoineae* n. sp. = *Lithothamnium* “b” Adey, 1966’, but three papers published by Adey in 1966 are listed in his bibliography, without differentiating them. Art. 44.2 of the ICN (Turland & al. 2018) mandates that, ‘A name of a new species or infraspecific taxon of non-fossil algae published on or after 1 January 1958 is not validly published unless it is accompanied by an illustration or figure showing the distinctive morphological features, or by a reference to a previously and effectively published such illustration or figure.’ In his description of *Lithothamnion lemoineae*, Adey (1970: 228, as “*Lithothamnium*”) wrote, ‘See 5 for detailed morphological, anatomical, ecological treatment.’ The italicized ‘5’ refers to Reference 5, ‘1966. The genera *Lithothamnium*, *Leptophytum* (nov. gen.) and *Phymatolithon* in the Gulf of Maine. *Hydrobiol.* 28: 321–70’, but there is no reference to any figures in this publication.

Roseolithon mirabile (Foslie) P.W.Gabrielson, J.J.Lamb & Hughey, comb. nov.

Basionym *Archaeolithothamnion mirabile* Foslie, *Det Kongelige Norske Videnskabers Selskabs Skrifter*, 1898 (6): 3, 1899.

Phycobank registration: <http://phycobank.org/105587>

Note: The designation “*Roseolithon mirabile*” was published without a “full and direct” citation of the intended basionym (Gabrielson & al. 2024) as required by Article 41.5 of the ICN (Turland & al. 2018).

I thank Richard L. Moe, Michael D. Guiry and Giovanni Furnari for helpful discussions.
